Research Projects

2024–present Stellar Properties of JWST-selected Faint Dusty Star-forming Galaxies (DSFGs)
Advisor: Prof. Amy Barger, UW-Madison
Study physical properties and morphologies of red JWST NIRcam color-selected DSFGs to reveal the morphological properties of a large, faint submillimeter sample for the first time and compare the brightest DSFGs to the fainter population.

2023–2024 SCUBA-2 and ALMA Selections of Faint DSFGs in A2744
Advisor: Prof. Amy Barger, UW-Madison
Compared selection of DSFGs using ALMA 1.2 mm observations with a red color selection using JWST NIRCam data with SCUBA-2 850 μm observations. First-author publication published in ApJ (McKay et al. 2024, ApJ, 962, 128).

2022–2023 Dust Properties of DSFGs in GOODS-S
Advisor: Prof. Amy Barger, UW-Madison
Used multiwavelength ALMA observations along with SCUBA-2 450 and 850 μm data to study the dust temperatures and spectral emissivity indices of 57 DSFGs by fitting SEDs. Resulted in a first-author publication (McKay et al. 2023, ApJ, 951, 48).

2020–2021 Implementing Accretion Disk Angular Momentum Transport into MESA
Advisor: Dr. A. J. Poelarends, Wheaton College
Senior Honors Thesis project using the Modules for Experiments in Stellar Astrophysics (MESA) code to simulate how an accretion disk around an accreting star regulates the angular momentum transfer and rotation speed of the star.

2019 Emission and Current Distribution of a Laboratory Plasma Arcade
Advisor: Dr. Darren Craig, Wheaton College
Ran trials of pulsed plasma array, operated CCD imaging, and analyzed extent of current distribution. Presented results at SPS Physics Congress 2019.
